DATASHEET

Cellox Haemostatic Gauze Roll 56G

Time is critical when treating severe injuries in the field and saving time increases the chance of survival for the casualty in an emergency or hostile situation. To be effective in real use, haemostats need to work fast.

The current generation of haemostatic agents need at least 3 minutes of compression to work. Celox RAPID Gauze removes the delay by speeding up packing time and reducing compression time to just 60 seconds while using the proven haemostat technology of Celox.

This saves valuable time in an emergency as well as reducing blood loss. Independent testing showed 100% success in achieving haemostasis and reduced blood loss compared to other treatments.

The key users of CELOX RAPID are professionals exposed to situations where traumatic blood loss can occur, including Military, special forces, tactical units, law enforcement, first responders and emergency services personnel. Celox RAPID maintains its volume and adhesion to wet tissue during use, helping it to stay in place during patient transport and maintain haemostasis during transit. Dimensions: 7.5 x 152cm
